

CATTLE COAT COLOR TEST REPORT

| | |
|---------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| <i>Provided Information:</i> | Case: NC101331 |
| <i>Name:</i> WM CRUELLA'S ELSA | <i>Date Received:</i> 27-Jan-2026 |
| <i>Registration:</i> | <i>Report Issue Date:</i> 03-Feb-2026 |
| | <i>Report ID:</i> 3950-9494-5097-0017 |
| | Verify report at vgl.ucdavis.edu/verify |
| <i>DOB:</i> 07/13/2025 <i>Sex:</i> Female <i>Breed:</i> HighPark | |

RESULT

INTERPRETATION

| | |
|--------------------------|------------------------------------|
| DILUTION (PMEL17) | Dh/Dh |
| MC1R (EXTENSION) | E^D/E⁺ |

Two copies of PMEL17-delTTC dilution variant. Coat color is pale cream/white.

Dominant black, carrier of wild type.

Additional Information

If testing for a disease or a disorder was performed and results indicate the animal is affected or at risk, we recommend contacting your veterinarian for further clinical evaluation and for additional information on disease and management.

For more detailed information on Cattle Coat Color test results, please visit our website at:
vgl.ucdavis.edu/test/mc1r-cattle
vgl.ucdavis.edu/test/cattle-dilution

For terms and conditions of testing, please see vgl.ucdavis.edu/about/terms-and-conditions

Results are determined using PCR-based methods. The results relate only to the sample tested as identified by the submitter (for example, identity and/or breed).

Report authorized by Dr. Rebecca Bellone, VGL Director

Veterinary Genetics Laboratory · University of California Davis · One Shields Ave · Davis, CA 95616

The coat color phenotype in cattle depends on multiple genes. The Veterinary Genetics Laboratory offers testing for Extension (*MC1R* gene) and Dilution (*PMEL17* gene).

The table below shows the expected phenotype based on the various possible genotype combinations of these two genes. While these two loci together explain some coat color phenotypes in Highland cattle, it is important to note that other, yet unknown, genes may influence the resulting coat color observed and the animal may have a different phenotype than what is predicted by the Extension and Dilution genotypes alone.

| Extension (<i>MC1R</i>) | Dun Dilution (<i>PMEL17</i>) | Coat Color Phenotype Predictions |
|---------------------------|--------------------------------|-----------------------------------|
| E+/E+ | N/N | Red |
| E+/e | N/N | Red |
| e/e | N/N | Red |
| E+/E+ | Dh/N | Yellow |
| E+/e | Dh/N | Yellow |
| e/e | Dh/N | Yellow |
| E+/E+ | Dh/Dh | White/cream |
| E+/e | Dh/Dh | White/cream |
| e/e | Dh/Dh | White/cream |
| ED/ED | N/N | Black |
| ED/E+ | N/N | Black |
| ED/e | N/N | Black |
| ED/ED | Dh/N | Dun |
| ED/E+ | Dh/N | Dun |
| ED/e | Dh/N | Dun |
| ED/ED | Dh/Dh | Silver Dun (CAN) or Silver (USA)* |
| ED/E+ | Dh/Dh | Silver Dun (CAN) or Silver (USA)* |
| ED/e | Dh/Dh | Silver Dun (CAN) or Silver (USA)* |

Table 1: Coat color phenotypes based on Extension and Dilution genotypes. *Adapted from Schmutz SM, Dreger DL. (2013) doi: 10.1111/j.1365-2052.2012.02361.x.*

* The Canadian Highland Cattle Society uses the term "Silver Dun" whereas the American Highland Cattle Association refers to this phenotype as "Silver"
